

Section 2 - Environment Setup - [Windows - Linux - Mac]

C++ Compilers for Specific OS's

- **Windows:** MSVC, GCC, Clang
 - **Linux:** GCC, Clang
 - **Mac:** GCC, Clang
-

Advice

- C++ is a **cross-platform development language**, meaning it can be used to develop applications for Windows, macOS, Linux, and even for mobile or embedded devices.
 - It is highly recommended to understand how C++ works on **multiple platforms**.
 - **Strong advice:** Watch the setup and installation videos for all platforms to get a feel for how C++ setup works on major desktop systems.
